

TOP 6 WEB DEVELOPMENT TRENDS IN 2022

PROGRESSIVE WEB APPS

PWAs help websites load in no time and can also work offline in apps like Google Maps.

AI CHATBOTS

Besides assisting companies in performing faster operations using voice or text chats, AI-enabled chat bots also help improve the customer experience.

ACCELERATED MOBILE PAGE

Google's AMP can help improve core business metrics, such as the number of conversions on web pages.

SINGLE PAGE APPLICATION

SPAs consume less space on servers and provide information to users efficiently on a single page without the need to navigate around.

MOTION UI

Motion UI is a front-end framework that enables developers to build fully responsive websites and mobile applications
